

Nlyte Asset Explorer Connector for ServiceNow CMDB

DATA SHEET

Cost effective Discovery and Reconciliation for ServiceNow Inventory. Import asset hardware, configuration, services, and software data into ServiceNow through Nlyte Asset Explorer Connector:

- Automatically discovers any asset on the network
- Asset data is synchronized to ServiceNow Asset Management system and then to the CMDB
- No protocol or platform restrictions
- No agents

Nlyte's Connector for ServiceNow Inventory leverages the next generation discovery and business logic engine in Asset Explore a Technology Asset Management solution from Nlyte. Its agentless approach can identify any hardware, software, or IoT device connected on your network and subnetworks, anywhere. It collects the broadest asset inventory, identifying hundreds of attributes, regardless of

vendor, technology, or protocols, from the most economical platform on the market. This rich information ensures your ServiceNow implementation has the most accurate, up to date inventory information to ensure accurate accountability, rapid service resolution, improved asset management and capacity planning, as well as improving transparency and risk reduction.

Nlyte Asset Explorer Connector for ServiceNow CMDB

Benefits

Nlyte Asset Explorer enables ServiceNow customers to automate the process of IT inventory discovery – linking assets to people to locations - through intelligent collection and normalization of asset information. It eliminates the manual steps in gathering and integrating asset information by automating the collection processes, thus reducing errors and cost. Scanning is built into the core architecture and provides the ability not only to collect IT data automatically but also to normalize and synchronize this data into the ServiceNow CMDB for complete and more accurate asset information. Nlyte Asset Explorer also provides the ability to reconcile between joint customers' financial fixed asset systems and their dynamic IT asset baseline.

About Asset Explorer

Nlyte's Asset Explorer software is a next generation IT Asset Management (ITAM) solution extending its discovery, inventory, and business intelligence engine to include facilities and IoT infrastructure and devices. Asset Explorer is a complete solution that automatically collects and provides detailed information about every device connected to the network. The solution includes all the tools and technology to identify and visualize the results of the discovered assets – configuration attributes, services/ processes, network connections, and applications.
