

Nlyte Device Management

DESCRIPTION

This course is aimed at system admins who are familiar with setting up system configurations. During the class you will be shown how to setup the Read Firmware, Update Firmware, and Update Attribute Actions in the device configuration file. You will also learn how to create simple processes that incorporate the integration activity in NAO Workflow. Prior working knowledge of NAO Workflow design is required.

Note this is not a hands-on training class and the topics taught will be through demonstration.

PRE-REQUISITES

NAO Workflow Training

DURATION

Half Day

Class Size

6 Delegates

CONTENT

INTRODUCTION

- Managing Power Strips in Nlyte
