

REASONS FINANCIAL SERVICES ORGANIZATIONS NEED DCIM TO STAY SECURE, COMPLIANT, AND **AI-READY**

STRENGTHEN SECURITY AND REDUCE CYBER RISK

Cybersecurity remains a top priority for financial institutions, where every server, storage device, network component, and edge asset can introduce risk if not properly managed. DCIM provides a centralized view of infrastructure assets, enabling security teams to identify, locate, and manage assets more effectively while reducing blind spots and strengthening operational control.

IMPROVE REGULATORY COMPLIANCE AND AUDIT READINESS

Financial services organizations must meet stringent compliance requirements, making accurate and auditable infrastructure data essential. DCIM provides real-time visibility and automated records that simplify audits, strengthen change control, improve reporting consistency, and reduce operational risk.

ENABLE AI-POWERED OPERATIONAL INTELLIGENCE

AI is transforming how financial institutions manage infrastructure, but its effectiveness depends on access to accurate, real-time operational data. DCIM provides the visibility and intelligence needed to support AI-driven forecasting, optimize resources, identify issues earlier, and enable more proactive operations.

SIMPLIFY DEVICE AND CERTIFICATE MANAGEMENT

Financial institutions manage thousands of connected devices across data centers, branch locations, and edge environments, making security and certificate management increasingly complex. Automated device management helps improve security, accelerate firmware updates, reduce certificate-related disruptions, and enhance operational reliability.

INCREASE OPERATIONAL RESILIENCE AND REDUCE DOWNTIME

Downtime can have significant financial, regulatory, and reputational consequences for financial institutions. DCIM provides real-time visibility into infrastructure operations, helping teams identify risks early, improve resilience, and maintain service availability.

OPTIMIZE CAPACITY, ENERGY, AND INFRASTRUCTURE INVESTMENTS

Financial institutions must balance growing infrastructure demands with ongoing pressure to control costs and improve efficiency. DCIM provides visibility into power, space, cooling, and asset capacity, helping organizations optimize resources, defer unnecessary capital spending, and support sustainability goals.

CREATE A SINGLE SOURCE OF TRUTH ACROSS THE ENTERPRISE

Financial organizations often struggle with fragmented infrastructure data spread across multiple systems and teams. DCIM creates a centralized source of truth that improves visibility, strengthens collaboration, and supports faster, more informed decision-making.
